Rudradev Arya

Pune, India 412307

Education

MIT-ADT, Pune **Nov. 2021 – June 2025**
B.Tech in Computer Science and Engineering, Cloud Computing *Pune, MH*

Experience

Siemens Digital Industries Software **Aug. 2025 – Present**
Software Engineer *Pune, MH*

- Automated **security issue triage** for core Teamcenter and Teamcenter X images: a Python tool pulls SI tickets from Polarion, checks each CVE against NVD, CVE.org, Red Hat, and the **internal SBOMs in SCPone** (Teamcenter server and UBI .NET components), ranks CVSS evidence, and drafts the review comment, with dry-run by default and CSV audit logs.
- Drove **security mitigation** on the **RHEL UBI base images and Teamcenter images/AMIs**: updated vulnerable packages and libraries, rebuilt and re-verified the images against the SBOM, and closed the findings in Polarion.
- Automated the build of a ready-to-use **Teamcenter X demo machine image**: a GitLab CI pipeline (Terraform, Ansible) creates temporary AWS infrastructure, installs the full stack over SSM, saves a KMS-encrypted AMI, and tears it down; multi-hour builds **resume from the failed step**.
- Built core features of the portal engineers use to **request and manage Teamcenter X cloud environments** (React, Express, MongoDB): dashboards, search, quotas, scheduled deploys, retries.
- Secured it with **JWT and role-based admin access**, webhook token checks, and WSS for the in-browser xterm.js SSH/Azure terminal; added Coverity to GitLab CI and fixed its defects.

Pratiti Technologies **July 2025 – Aug. 2025**
DevOps Intern *Pune, MH*

- Wrote reusable Terraform modules (VPC, EC2, IAM) and Ansible roles, run from a single GitLab CI pipeline for repeatable AWS environments.

Unizoy **Apr. 2025 – July 2025**
Backend Developer Intern *Remote*

- Core backend contributor (**140+ commits**) on iDelta Books, a NestJS and PostgreSQL back-office for a trading firm that turns daily NSE, BSE, and MCX broker files into P&L, margin, interest, and ledger reports.
- Designed a shared **background export system** (BullMQ, Redis, S3) that lets **10+ reports** generate CSV or Excel files without blocking the API, delivered through expiring download links.
- Built P&L and admin dashboard APIs with access control for 5 user roles, and replaced per-row query loops with bulk SQL so dashboard totals match the reports.

Freelance **2024 – Present**
Software Developer *Remote*

- **MahaCPD:** built the frontend and tests for a platform where Maharashtra doctors log seminar hours toward yearly license-renewal credits.
- **Web3 startup (stealth):** set up CI/CD with GitHub Actions, Docker, and AWS so local and cloud builds behave the same.
- **GoQuant:** built C++ clients for crypto exchange APIs (Deribit, OKX) that place and cancel orders and stream live order books.

Projects

LambdaMailer | *Node.js, AWS Lambda, Amazon SES, Elastic Beanstalk, React* **Feb. 2024**

- Serverless bulk-email service: upload a CSV and send. Delivered **50,000 emails** at 200/sec with a **99.2%** success rate for about $40/month.

EventU | *Next.js, TypeScript, Appwrite, Tailwind CSS* **Aug. 2023**

- Event discovery and registration platform with auth and file storage; server-side rendering cut page load times by about **40%**.

Minecraft-style Voxel World Engine | *Python, Pyglet, CUDA* **Apr. 2023**

- 128×128 3D block world; moved rendering to the GPU with CUDA, raising frame rate from 50 to **270+ FPS**.

Elevator Dispatch Simulator | *Java, Arduino, C++* **Jan. 2023**

- Compared various elevator scheduling strategies in simulation and built an Arduino prototype that predicts passenger wait times.

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL, C++, Java | **Backend & Frontend:** Node.js, NestJS, Express, React, Next.js, PostgreSQL, MongoDB, Redis | **Cloud & DevOps:** AWS (EC2, AMI, S3, Lambda, IAM, SES), Terraform, Ansible, Docker, GitLab CI, GitHub Actions | **Security:** Coverity (SAST), Polarion SI triage, SCPone SBOM, CVE/CVSS analysis (NVD, Red Hat), RHEL UBI image patching

Certifications

NVIDIA DLI: Fundamentals of Accelerated Computing with CUDA C/C++ ↗
AWS Academy: Cloud Architecting ↗ | **AWS Cloud Quest:** Cloud Practitioner
